**Архитрав** – нижняя из трех горизонтальных частей антаблемента, опирающаяся непосредственно на капители колонн. В дорическом и тосканском ордерах архитрав, как правило, гладкий; в ионическом, коринфском, композитном он состоит из нескольких уступов – фасций. В античных храмах дорического ордера, наиболее связанного с приемами деревянной архитектуры, архитрав по ширине практически равен фризу. Но позже этот элемент начали сужать, а иногда обходились и без него. Антаблемент, в котором архитрав отсутствует называют облегченным.
